School Projects:
Turkish Airlines (Netbeans IDE)
Created an airline application for both user and the admin, which focuses on the booking process for a user and the end user captures the database.
Vehicle Voting System (Netbeans IDE)
This system is a digital platform that allows citizens to participate in the voting process using their vehicles, enhancing accessibility and convenience.
Historical Website (Figma Project)
The Figma project was a gym app that focuses on creating an intuitive interface that allows users to track their workouts, set timers, and adhere to strict train schedule.
Voting Pol Smart Contract (Remi IDE)
This is a Voting System smart contract, which allows creation of multiple ballots where registered voters can cast votes for their preferred candidates and ensures voting is only allowed during the ballot's active time
